We, the Gelle family, have been producing practical rubber and plastic parts for the German and international markets for over 50 years. Modern machines are used to create high-quality products for the agricultural sector and for modern, professional equestrian sports as well as practical, innovative promotional items.

Your satisfaction is our pursuit! Flexibility is our strength!

Our products are extremely resilient. We only use high-quality plastics with a long service life. Benefit from our many years of experience.

Convince yourself of our quality "Made in Germany"!

We look forward to a good collaboration.

Your GEWA® - Team

practical - durable - individually High quality promotional items, that will be remembered!

Promotional items are the only advertising a customer will thank you for. With our practical and long-lasting promotional items you can leave a lasting impression.

Promotional items - Made in Germany

We, as a German manufacturer, guarantee the best quality at low prices. With our many years of experience, we can support you in selecting the right item and print it effectively.

Buy best quality - after all, your good name is on it!

Your advantages:

- German quality goods
- directly from the manufacturer
- Flexibility
- Design service
- short production time
- large selection of colors

Calf teat cylindrical

This high quality teat is used as well with calf feeding buckets as at automatic calf feeders. The cylindrical teats are available in lengths of 10 cm or 12 cm.

3000 - 3001

Calf teat cyl.
10 cm red

3010 - 3011

Calf teat cyl.
12 cm red

3101 - 3102

Calf teat cyl.
10 cm white

3110 - 3111

Calf teat cyl.
12 cm white

Calf teat conical

The conical rubber calf teats are specially designed for use with drinking buckets. The conical teats have a reduced milk flow, which means that calves drink more slowly and therefore take in less air.

3020 - 3021

Calf teat
conical red

3100 - 3109

Calf teat
conical white

Teat for aluminium valve

This red teat for aluminium valves is made of durable rubber. It fits perfectly and has a round hole for a high flow rate.

Special calf teat

The cylindrical calf teats are made of an extremely tough rubber that promises a long service life. Ideal for feeding operations.

3120 - 3121

Calf teat cylindrical black

3130 - 3131

Calf teat cylindrical green

Calf teat soft

This cylindrical calf teat is appropriate especially for newborn calves. They like very much the very soft rubber. We also recommend it for the administration of colostrum or medicines to sick animals.

3172

Calf teat natural caoutchouc

3173 - 3174

Calf teat latex

Teat "Leimer"

Our teat "Leimer" is a reliable tool for feeding calves since many years. You put the teat into a bucket or tub filled with water or milk. So calves can also drink from open troughs.

3036

Latex bottle teat

Our food proof bottle teat can be put on customary bottles with opening diameter of about 25 mm. Because of its strengthened opening the teat holds very tight on the bottle. Calves like very much its soft material.

3175

3251

3231

3220

2000

Tube feeding system - changeable

This tube feeding system has been developed for simple mounting and dismantling. The u-shaped wall mount holder can be fixed with three screws at the wall (with the pins as spacers). The teat valve can be put on and removed very simply. After having fixed the hose at the teat valve the liquid from a drinking trough can flow through it. The non-return valve inhibits backflow of liquid.

- including wall mount, teat valve, teat, large non-return valve (Art. No. 3230) and hose

Non-return valve / non-return and connection valve large

The non-return and the connection valve made of very stable plastic material prevent liquids from flowing back from hoses. So colics will be prevented, because the calves will suck less air into their stomachs. Three nubs at the bottom prevent adhering of the valve at the bottom of the trough.

Wall mount holder

Being very stable it's appropriate for quick mounting and dismantling of the teat valve (Art. No. 2000). The wall mount holder has to be fixed with three screws at the wall.

The teat valve can simply be stuck on the wall mount holder.

GEWA Valve

The valve can not be overwinded and thanks to its non-return valve the milk can only flow to the opening of the teat. The hose connection has always to be at the bottom of the suction system.

Tube feeding system - fixed installation

This system has been developed for the quick and simple fixed installation in stables. The wall holder has to be fixed with three screws on the wall. The stainless steel pipe has to be inserted through the wall and connected at the backside with the hose. For feeding, the hose has to be inserted to a storage container. An optional non-return valve and a connection valve prevent a backflow of milk from the hose.

- including teat, wall holder with stainless steel pipe, 150 cm hose
- Non-return-valve (Art. No. 3251) and connection and non-return valve (Art. No. 3249) can be ordered optionally

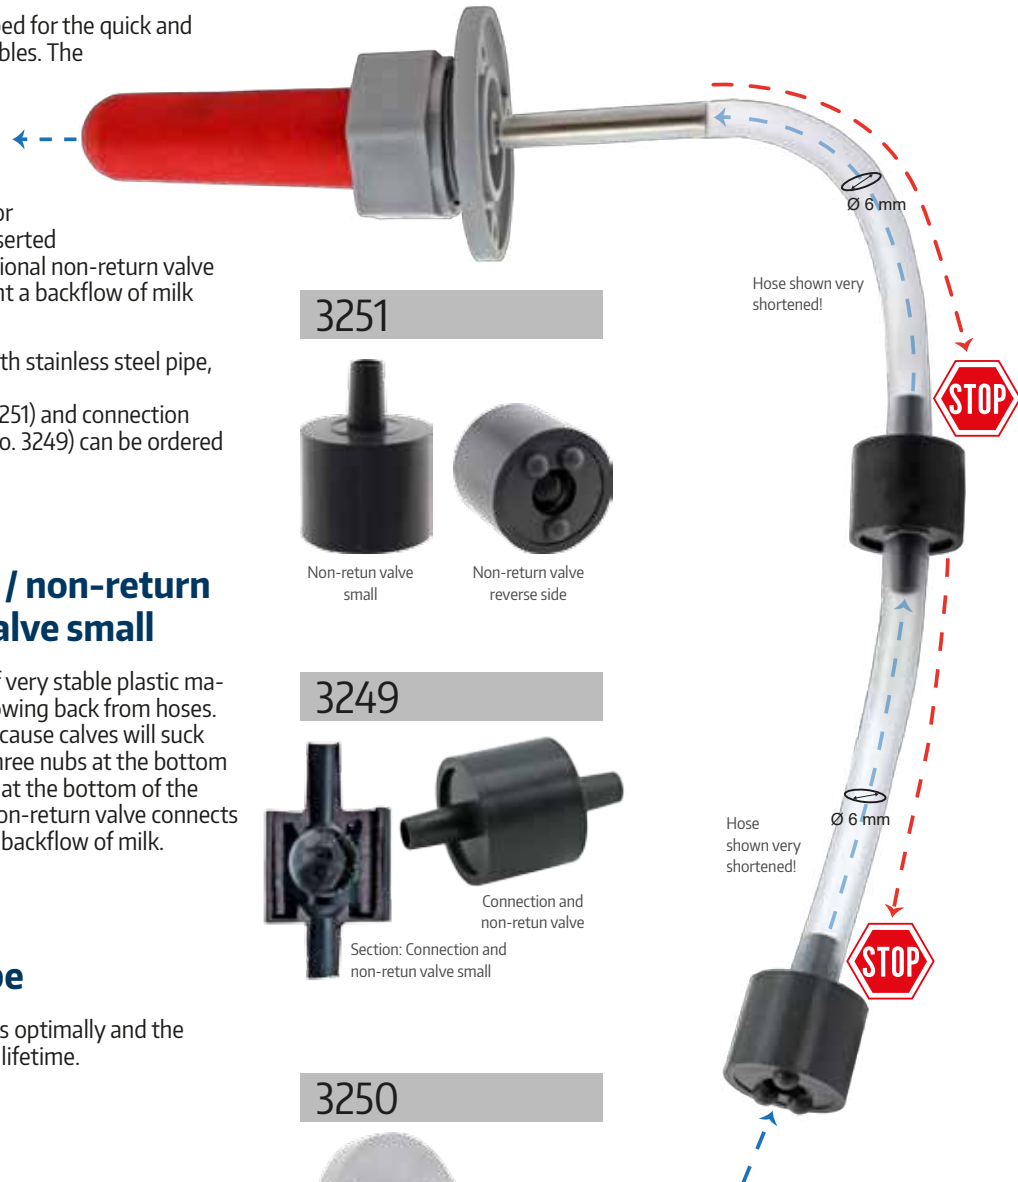

Non-return valve / non-return and connection valve small

The non-return valve made of very stable plastic material prevents liquids from flowing back from hoses. So colics will be prevented, because calves will suck less air into their stomachs. Three nubs at the bottom prevent adhering of the valve at the bottom of the trough. The connection and non-return valve connects parts of hoses and prevents a backflow of milk.

Wall holder with stainless steel pipe

The high quality plastic nut fits optimally and the stainless steel pipe has a long lifetime.

Milk bottles for calves

The practical plastic milk bottles for administering milk and/or medication. The bottles are compatible with all GEWA teats.

- with easy-to-read scale
- including red teat

4101

4110

4130

Milk bottle calves Deluxe

These new bottles made from plastic material are ideal for feeding milk and/or giving medicine. A well readable scale and a large filling opening help with exact dosing. The 2- and 4 l bottles have a practical handle, a shoulder strap can be attached to the 4-l-bottle additionally. Because of their large opening they are easy to clean. They have a self-regulating air valve, which prevents a vacuum. The bottles are suitable to all GEWA teats and therefore versatile.

- with easy-to-read scale
- including red teat and non return stick

4180

4184

4188

Shoulder strap optionally available #8007

4145

Premium milk bottle

Our Premium milk bottle for calves offers an outstanding functionality. It has a big opening for filling and cleaning. A self-regulating air valve prevents a vacuum. The bottle is compatible with all GEWA-teats. Because of its integrated scale it is also appropriate for dosing medicine.

- with easy-to-read scale
- including red teat and non return stick

4160

VARIO bottle for calves

This big 2.5 l bottle is appropriate for feeding larger milk quantities. Thanks to a slide bar the milk flow can be regulated easily. Its large opening enables easy filling and cleaning.

- with easy-to-read scale
- including red teat and non return stick

4147

Drencher

This drencher enables an easy and secure drenching of sick and weak calves. Its capacity is 3 liters and it has an 80 cm long flexible hose which is connected with a 50 cm long gorge tube. At the end of the gorge tube there is a rounded plastic top for secure passing into the gullet. A large filling opening, a poured-in scale and a self-regulating air hole make handling easier.

- Before using the drencher please check the end cap and all plug connections for tightness.

8006

4169

Professional drencher

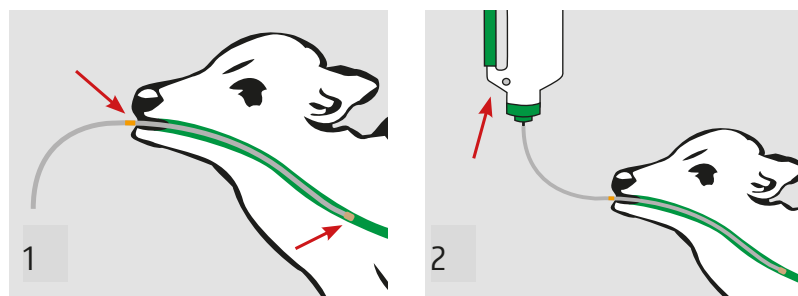

Recommended by veterinarians our Professional drencher enables easy and secure drenching of sick and weak calves. It has a special hose with a heavy brass head for easy passing into the gullet. A marking at 45 cm indicates maximum passing of the hose. An extra-large filling-opening, a poured-in scale and a self-regulating air hole make handling easier.

Length of hose 100 cm

- Before using the drencher please check the end cap and all plug connections for tightness.

4170

Set spare parts for professional drencher

Guide for drenching with the professional drencher

- Insert the tube with the brass head first (fig. 1).
Warning: Make sure that the tube is inserted into oesophagus and not into trachea!
- Attach full drencher-bottle to tube.
- Raise drencher-bottle with finger on air hole (fig. 2).
- Remove finger from air hole to administer liquid.
Liquid flows out of the bottle into the stomach.
- To end drenching, carefully remove the tube from the oesophagus.

8015

Connection piece for professional drencher

4156

Grain-/pellet bottle 2.5 liters

This bottle is ideal for feeding grain or feed pellets. Thanks to its large filling opening you can fill and clean it very easily. A suitable grain or pellet teat lets the content only out when the calf is chewing on it. An integrated handle makes mounting and demounting in the optional metal holder convenient. The teat holder is also compatible to our GEWA-calf teats; so you can also fill milk into the bottle. So it's very versatile.

- including grain-/pellet teat (Art. No. 3041)

4159

Metal holder for grain-/pellet bottle

Developed for fast installation of grain/pellet bottles. The bottle can be securely fixed with it and is protected against falling down. For easy mounting at the wall.

- suitable for grain/pellet bottle Art. No. 4156

3041

Grain-/pellet teat

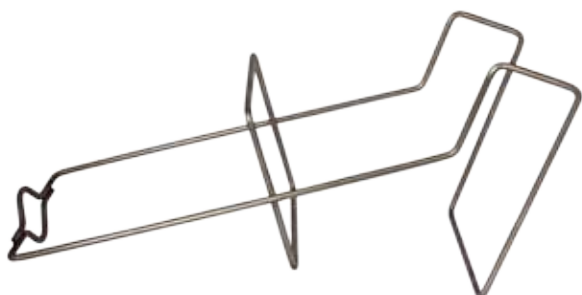

This teat is very durable because of its hard-wearing material. Two rubber lips in the teat let the content only out when the calf is chewing on it.

- suitable for grain-/pellet bottle Art. No. 4156

Art. No.	Article description							
4156	Grain-/pellet bottle incl. grain/pellet teat	2.5 l	37 cm		10 cm	16 cm	230 g	✓

4150

Metal holder for milk bottles

This metal holder, suitable for 1 and 2 l milk bottles, is easy and flexible to be installed. It can be easily hung to the stable wall and secures the plugged in milk bottles.

4168

Plug for milk bottle

The plug reliably seals milk bottles. Freezing colostrum is possible without any problems. Compatible with all GEWA milk bottles.

3257

Calf toy, green

3260

Calf toy, red

The calf toy has a teat without hole and a holder for wall-mounting. It helps the calves to occupy themselves and thus takes care for their well-being.

- including calf teat without hole

4500

Calf muzzle

This easy to fix calf muzzle prevents navel sucking and urine drinking of calves. It also keeps new born calves away from wrong food like bedding.

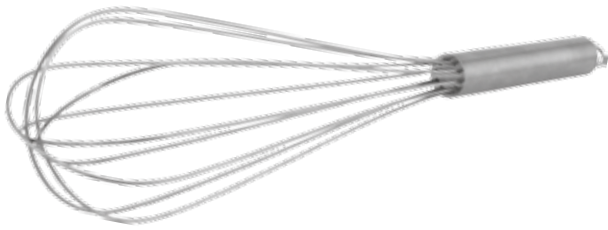

- including two 75 cm webbings

Quilted calf blanket

This blanket protects your calf from rain and cold with its very stable and fast-drying polyester fabric. The inner side has quilted combs, which are filled with polyester fabric for optimal insulation. The size adjustable webbings have stable plastic buckles for a secure hold.

- Not suitable for group housing.

1017

Calf blanket Deluxe

At temperatures below 11 °C calves have an increased danger of getting sick. Therefore we recommend protecting them from strong temperature fluctuations. This protection offers our calf blanket Deluxe with its very stable and fast-drying polyester fabric with 2,5 mm neoprene on the inner side. For an easy handling the chest strap is equipped with velcro. The size adjustable leg and abdominal webbings have stable plastic buckles for a secure hold.

- Not suitable for group housing.

1180

Lid for rectangular lamb bucket

The lid for the rectangular lamb bucket is characterized by a high fitting accuracy. A practical tab makes it easy to remove the attached lid.

The Premium lamb bucket is made of food-safe plastic that is very easy to clean. The lamb bucket has a reinforced and widened holder, which significantly improves its durability and allows the bucket to be used much more flexibly. The two milk chambers have a sloping base, which means that the milk residue remaining in the bucket is extremely low.

1110

1135

Lamb bar

The lamb bar is suitable for use in cold weather. Lambs quickly suffer from diarrhea if they consume milk that is too cold. The lamb bar has two separate filling containers so that the milk can be placed in a warm water bath and is protected against rapid cooling. The smooth and sturdy plastic is very easy to clean.

- including suction cups, valves and hoses

The extremely sturdy plastic and metal holders fit all GEWA feeding buckets. The brackets have a long service life. Installation is simple and secure.

1190

Plastic holder

2040

GEWA lamb valve

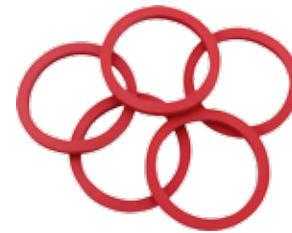

The inexpensive lamb valves are used in lamb teats as a non-return valve. They effectively prevent the milk from flowing back into the bucket.

GEWA lamb teats

The lamb teats made of rubber have been developed especially for the use with lamb buckets. The teats have a cross cut which opens as soon as the lamb begins to suck or to chew. The teats have a reduced milk flow, so the lambs are drinking slower and inhale less air. Teats are available in 50 mm and in 70 mm.

- Lamb teat Art. No. 3060 and 3063 suitable for valve Art. No. 2000, 1999

- Lamb teat Art.-Nr. 3080 suitable for valve Art. No. 2040

3060

3063

3080

GEWA lamb teat Latex

The soft lamb teats are often used for newborn lambs because the soft rubber is quickly accepted. Also recommended for the administration of colostrum or medicine to sick animals.

Teat for small animals

This teat was developed for feeding different small animals. They like the soft material and therefore it is also ideal for giving medicine to sick animals. By cutting off its top you can adapt individually the drinking opening as well as its flow volume. Therefore a slower and healthier drinking can be guaranteed.

Cattle

4200

Cow tail holder "Allgäuer"

Optimal for tethered stables. It protects the cow from getting dirty. It is also very useful during milking, because the milker won't be disturbed by the cow tail.

The upper rubber (A) is fixed securely at the ceiling of the cow stand and cannot slip. By means of an upper holder (B) made of metal the upper rubber is connected with the elastic string (C). The string functions as an overload protection and loosens the holder in case of excessive traction. By means of a Nylon string the cow tail can be hung higher (for example when you're milking). At the lower part you find a quick lock for the cow tail. It consists of a metal pin (E) and a lower rubber (F). This holder is also available completely with rubber cord.

4220

Cow tail holder "hairless"

Optimal for tethered stables. It fits very well to cow tails without any hair.

The upper rubber (A) is fixed securely at the ceiling of the cow stand and cannot shift. By means of an upper holder (B) made of metal the upper rubber is connected with an elastic string (C). The string functions as overload protector and loosens the holder in case of excessive traction. At its end you find a closure tube (G), in which you can fix securely the cow tail.

The special shape of the tube prevents clamping off the blood supply.

3540

GEWA quarter milker

Instructions for use

1. Place the O-ring on the kettle opening and lubricate with grease. This allows you to open and close the lid easily.
2. Press on the cover with the ball of your hand and at the same time turn it to the right until it engages.
3. Connect the hose with the adapter to the dipper of the milking machine.
4. Connect the hose without an adapter to the milk claw and fasten it over the valve cage.
5. Clean by hand with detergent after use.
6. After cleaning, open the milking machine and let it dry out.

With our quarter milker milk can be milked separately from an udder quarter, if it should be contaminated or if it should show an increased cell content. The very stable plastic kettle has a large opening for easy cleaning and has a pressure limit of 0.4 bar up to max. 0.6 bar. (Dimensions without hoses)

For three-row cows, blanking plugs are used to maintain the vacuum of the milking machine and enable a hygienic and smooth milking process.

4350

Pre-milking cup, 1 liter

The pre-milking cup is used to check the first jets of milk from each teat. The special sieve catches coarse dirt and prevents the foremilk from splashing when it hits. In addition, the pre-milking cup is used to prevent mastitis in dairy cattle. The foremilk contains most of the harmful bacteria that must not be allowed to reach the milking parlor floor. With this pre-milking cup you can easily dispose of this milk.

6023

Milk cell test, 1 liter

This ready-to-use solution is an excellent test tray liquid for quick and easy determination of cell contents of raw milk. Its simple handling and quick results will convince you.

The milk cell test tray has four wells in which a milk sample from each udder quarter can be tested for the number of somatic cells.

These dipcups are ideal for mastitis prevention and post-milking teat disinfection. The 250 ml soft plastic bottle with scale can be easily squeezed so that the disinfectant liquid can get into the large cup with a good teat cover. While the liquid returns to the soft plastic bottle in the Dipcup Return, the liquid in the Non Return Dipcup has to be emptied, which promises increased hygiene. A handy belt clip makes it easy to store.

Lickstone holders and troughs

Assembly tips for GEWA troughs

To enable you to adapt your trough to your conditions during assembly, no holes are pre-drilled. Measure the distances, mark the intended holes and simply drill the appropriate holes in the trough. In this way, you can mount the trough in the appropriate place according to your wishes - without having unnecessary holes in the trough!

GEWA troughs and lick holders are made of extremely durable and food-safe plastic. The products are highly stable thanks to their sophisticated shapes, front reinforcements and thicker walls. The plastic is easy to clean and is optionally available with a drain screw. Thanks to the wide range of different sizes and shapes, you too will find the right trough or lick holder for your stable.

GEWA Pylonetti

The Pylonetti, a mixture of Pylon and Cavaletti, can be used for any age group of riders and any work with horses: from the slalom to a visual guide for the rider, for help with tracking and the resulting straightness and balance of the horse to the cavaletti at three different heights. The Pylonetti is the space-saving helper from beginner riding lessons to jumping training.

7659

GEWA Eco manure collector

At first sight it looks like most of the common manure collectors. Only when using it you can see its many advantages. It is much lighter than other manure collectors but also very stable and long-lasting. Because of the extension of the handle the center of gravity moves backwards and so carrying is facilitated. The plastic rake is very light and can be easily clipped on the manure collector.

- including rake

7660

GEWA Easy manure collector

Thanks to its well-thought-out design mucking out is very comfortable with the easy manure collector. The new developed hand piece makes carrying the full manure collector much easier and it relieves your wrist. The plastic rake is pleasantly light to carry and can be easily clipped on the collector. Your ideal companion in stable and at tournaments.

- including rake

7656

GEWA manure collector with aluminium stick

The manure collector with an aluminium handle is practically indestructible. It is ideal for long-term outdoor use.

- including rake

7656	Manure collector with aluminium stick incl. rake (dimensions with stick)	92 cm	34 cm	30 cm	1450 g	120

7657

GEWA manure collector Shaker

The unique design of the manure collector allows an easy separation of manure, chips and sand. By simply shaking it, the sand and collected chips fall out through slots in the bottom, while the horse droppings remain in the manure collector. In addition to use in riding arenas and indoor arenas, the manure collector Shaker is therefore also ideal for cleaning stalls, provided that chips are used.

- including rake

7658

GEWA manure collector XL

The manure collector XL is mainly used for riding arenas and halls. The large shovel has a long durability because of the very robust plastic material. The extended handle facilitates carrying very much. A useful tool for saving time and treating the riding surface with care. The manure collector XL is delivered with a rake made of durable plastic which makes collecting manure much easier.

- including rake

7663

GEWA rake for manure collector

Wooden stick #7750 optionally available

The new developed rake, suitable for all Gewa manure collectors, is perfect for the cleaning of riding grounds, riding halls and stables. Also for the use on paddocks to avoid rank patches or for cleaning the truck. Thanks to the special shape of the rake the horse droppings can be easily and cleanly removed from the riding surface. The rake is made of resistant plastic and has consolidated tines which considerably raises its life endurance.

- Wooden stick suitable to rake Art. No. 7663 optionally available.

6196

Apple bucket

Fruits and vegetables mold quickly in airtight containers. The integrated air holes of our apple bucket ensure sufficient ventilation and you can store the food in it without any problems. The lid protects against vermin.

6199

Feeding bucket with belt

This feed bucket is specially designed for individual feeding of playpen horses. Without much commotion, each horse can be allocated its concentrated feed ration. The sturdy 120 cm webbing can be easily adjusted and is securely fixed with two metal carabiners and metal key rings.

More colors:

7693

GEWA cup for additional food Horse, 3 pieces set

Nowadays, horses need more and more medication or additional food. The additional food cup with pre-prepared food makes feeding easy and hygienic for the stable staff.

- Sufficient size
- Space-saving in the food trolley

7690

Weekly planner for additional food and medication, 160 ml

The weekly planner with embossed weekdays is optimal for the exact dosage of additional feed and medication. The easy-to-clean containers are characterized by simple handling. The weekly planner can be used either as a fixed installation or with the included hooks on the road. (Dimensions without hooks)

7685

XL-Weekly planner for additional food and medication, 300 ml

The practical, portable weekly planner with 300 ml containers is optimal for larger rations of supplementary feed and medicines. The lid protects the contents from dust and vermin. Included are seven cups with printed days of the week and two dosing spoons.

Includes plastic hooks (Art. No. 1192) for attaching the weekly planner to the box wall.

7686

GEWA Board for XL-Weekly planner

This new board makes our XL weekly planner complete! It can be attached to the stall wall with the hooks. So you never lose track in the stable and can easily allocate the daily rations to your horse.

6001

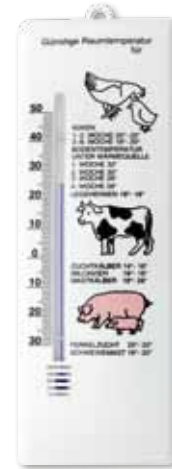

Outdoor thermometer

Made of plastic material it is for the use in weatherprotected outdoor areas. Free of mercury it indicates temperatures from $-40\text{ }^{\circ}\text{C}$ up to $+50\text{ }^{\circ}\text{C}$. It can be fixed with an eyelet at the wall.

6002

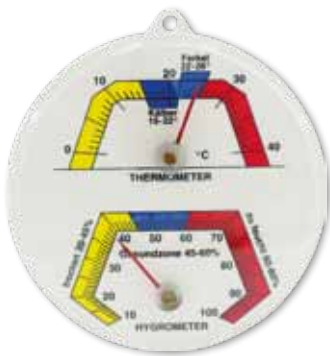

Stable thermometer

Free of mercury this thermometer indicates reliably the room temperature from $-30\text{ }^{\circ}\text{C}$ up to $+50\text{ }^{\circ}\text{C}$. There are printed recommendations on it for correct room temperature according to the animal species. Thanks to an eyelet the thermometer can be fixed easily at the wall.

6003

Thermo-hygrometer

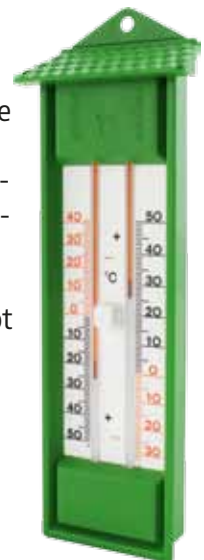

The control of targeted heating and ventilation creates a comfortable climate for animal husbandry. With this thermo-hygrometer you can determine reliably temperature and humidity in rooms. Optimal climate values are printed on it. The temperature is indicated from $0\text{ }^{\circ}\text{C}$ up to $40\text{ }^{\circ}\text{C}$ and humidity is indicated from 10 up to 100 %.

6006

Minimum-maximum-thermometer

The minimum-maximum-thermometer is used to make records of the minimum and maximum temperatures for a longer period. Simultaneously it indicates the current temperature. With a push button you can reset the values. The thermometer is weather proof and filled with a not dangerous liquid. Completely made in Germany it indicates temperatures from $-40\text{ }^{\circ}\text{C}$ up to $+50\text{ }^{\circ}\text{C}$.

Snow shovel for kids

CE DIN EN 71

This shovel for kids is the right instrument for kids in winter. Its low own weight enables children shoveling snow in an easy and playful way. This activity improves their movement activity and strengthens important muscle groups. To prevent injuries, it has no metal edge. CE and EN 71 approved.

- including 70 cm wooden stick - dimensions without stick

Not suitable for children under 36 months. Please supervise your child while playing!

640

Snow slider large

CE DIN EN 71

Conform with CE and EN 71 standards this slider consists of a high quality and cold-resistant plastic material. It has a broad edge with double-sided recessed grips for more security and optimal support.

More colors:

Not suitable for children under 6 years! Only for the use under supervision of an adult person.

Do not use on steep slopes! Observe instructions for use!
